About Me

I am a Full-Stack Software Engineer with hands-on experience architecturalizing end-to-end applications, proven by independent delivery of Barestore RMS—a full-stack SaaS Retail Management System built using Next.js, NestJS, and PostgreSQL. Bridging the gap between software development and modern infrastructure, I leverage self-taught expertise in Linux, Docker, and Proxmox VE to ensure scalable deployments. An agile developer driven by structured patience and rapid tech adaptation, looking to contribute high-ownership code and efficient systems to a forward-thinking engineering team.

Education

RevoU • Full Stack Software

Jun 2025 — Jan 2026

Completed an intensive full-stack software engineering program basic to advance in six month, specializing in frontend, backend, database management, and Software Development Lifecycle (SDLC) using Next.js, NestJS, and PostgreSQL.

Final Project: [Barestore RMS](#), a full-stack final project utilizing Next.js, NestJS, and PostgreSQL.

Kodland • Python Programming & Python GUI

Aug 2022 — Jan 2023

Learned basic Python programming language, PyGame, and Python GUI using Thonny software.

Project Experiences

Barestore RMS • Retail Management System

Nov 2025 — Jan 2026

A web-based Retail Management System (RMS) built as a SaaS (Software as a Service) application for a personal project and the RevoU final project assignment. Developed a full-stack Retail Management System (RMS) utilizing Next.js, NestJS, and PostgreSQL. Built responsive and intuitive user interfaces integrated with secure backend APIs and optimized database schemas. Implemented state management and modern styling tools including Tailwind CSS and CSS Modules.

Working Experiences

Wind Bridge (Youtube Channel) • Content Creator & Channel Manager

Jul 2023 — Mar 2026

- Managed end-to-end digital content lifecycle for a Minecraft creative channel, resulting in 1,600+ organic subscribers and 247,000+ total views through data-driven content strategies.
- Designed and rendered complex 3D visual assets using Minecraft (via Replay Mod & Flashback), Blender, Capcut and DaVinci Resolve, delivering high-quality cinematic and timelapse videos that secured 2,100+ hours of total watch time.
- Executed full-stack post-production workflows, including video editing, SEO metadata optimization, and thumbnail design, maintaining a consistent upload schedule to maximize audience retention.
- Leveraged YouTube Analytics to evaluate viewer drop-off rates, CTR (Click-Through Rate), and audience demographics, continuously iterating content formats to boost engagement metrics.

Technical Skills

- Programming Languages:** JavaScript, TypeScript, Python
- Frameworks & Libraries:** React.js, Next.js, NestJS, Tailwind CSS, CSS Module
- Databases & ORM:** PostgreSQL, MongoDB, Prisma ORM
- Cloud & Deployment:** Netlify, Vercel, Supabase, MongoDB Atlas, Railway, Koyeb
- Server & Infrastructure:** Docker, Proxmox VE, Linux (Debian, Ubuntu Server), Virtual Machines (VM), LXC
- Tools:** Git, VS Code, Postman, Figma
- Other Tools:** Capcut, DaVinci Resolve, Blender

Certification

- Certificate of Achievement, RevoU Faculty (pending)

Jan 2025
